METHOD OF GENERATING AND UTILIZING DEBUG HISTORY

ABSTRACT OF THE DISCLOSURE

The present invention is generally directed towards providing a method, system and article of manufacture for generating and utilizing debug history to improve the debugging process. By providing facilities to store and retrieve debug history records for given events, the present invention allows developers to debug code more efficiently by allowing them to leverage information stored in a debug history repository. Further, the added functionality, related to the debug history, is available via modules that work in conjunction with existing debugger applications and is provided to users via a variety of interfaces including graphic interfaces and plug-in components.
